CONTENTS

Experimental and numerical investigation of the three-dimensional transition in plane wakes. E. Meiburg and J. C. Lasheras *page* 1

Nonlinear spiral waves in rotating pipe flow. N. Toplosky and T. R. Akylas 39

The growth of a turbulent patch in a stratified fluid. Harindra J. S. Fernando 55

Electro-acoustic effects in a dilute suspension of spherical particles. R. W. O'Brien 71

Flow in a channel with a moving indentation. M. E. Ralph and T. J. Pedley 87

A new approximate expression for the response of a hot-wire anemometer. Michio Nishioka and Masahito Asai 113

A stochastic model for dispersion and concentration distribution in homogeneous turbulence. H. Kaplan and N. Dinar 121

Slow drift of a floating cylinder in narrow-banded beam seas. Yehuda Agnon, Hang S. Choi and Chiang C. Mei 141

The superharmonic normal mode instabilities of nonlinear deep-water capillary waves. S. J. Hogan 165

Laminar flow through slots. E. G. Tulapurkara, B. H. Lakshmana Gowda and N. Balachandran 179

Lagrangian approach to time-dependent laminar dispersion in rectangular conduits. Part 1. Two-dimensional flows. Shimon Haber and Roberto Mauri 201

Influence of wall suction on the organized motion in a turbulent boundary layer. R. A. Antonia, L. Fulachier, L. V. Krishnamoorthy, T. Benabid and F. Anselmet 217

Turbulent structure in low-concentration drag-reducing channel flows. T. S. Luchik and W. G. Tiederman 241

Large structure in the far wakes of two-dimensional bluff bodies. John M. Cimbala, Hassan M. Nagib and Anatol Roshko 265

The axisymmetric rise of a spherical bubble at the exit of an orifice in the presence of a stagnant cap of insoluble surfactants. Zeev Dagan, Zong-Yi Yan and Huixian Shen 299

Steady-state coating flows inside a rotating horizontal cylinder. R. E. Johnson 321

Incoherent turbulence structure in the near wake of a normal plate. M. Kiya and M. Matsumura 343

Resonant wave interactions in a stratified shear flow. R. Grimshaw 357

Studying turbulence using direct numerical simulation: the 1987 Center for Turbulence Research NASA Ames/Stanford Summer Programme. J. C. R. Hunt 375

Numerical modelling of nonlinear effects in laminar flow through a porous medium. O. Coulaud, P. Morel and J. P. Caltagirone 393

A study of the collapse of an array of cavities. J. P. Dear and J. E. Field 409

Do large structures control their own growth in a mixing layer? An assessment. Upender K. Kaul 427

Interpretation of shadowgraph patterns in Rayleigh–Bénard convection. D. R. Jenkins 451

Steady viscous flow past a sphere at high Reynolds numbers. Bengt Fornberg 471

On vortex formation from a cylinder. Part 1. The initial instability. M. F. Unal and D. Rockwell 491

On vortex formation from a cylinder. Part 2. Control by splitter-plate interference. M. F. Unal and D. Rockwell 513

Stochastic estimation of organized turbulent structure: homogeneous shear flow. Ronald J. Adrian and Parviz Moin 531

The slow dripping of a viscous fluid. S. D. R. Wilson 561

Report on the IUTAM symposium: fundamental aspects of vortex motion. H. Aref and T. Kambe 571
